

MATIAS ARIEL ACOSTA

FULL STACK DEVELOPER · JAVASCRIPT · TYPESCRIPT · REACT · NODE.JS · PYTHON/DJANGO · AWS

Buenos Aires, Argentina (UTC-3) | +54 11 6573 7597 | matiasariel1986@hotmail.com

linkedin.com/in/matias-ariel-acosta | github.com/matii1942 | portafolio-stnm.onrender.com

SUMMARY

Full Stack Developer building web applications with JavaScript/TypeScript, React, Node.js and Python/Django — CRUD applications, REST and SOAP services, and responsive interfaces, deployed to production on AWS, Render and Vercel. Applies object-oriented and functional programming, writes unit and integration tests with Vitest, integrates LLM APIs with attention to prompt design and token cost, and works in Agile (Scrum/Kanban) iterations. Career changer with a decade managing clinical data in an intensive care unit, where accuracy and traceability were non-negotiable — the same discipline he brings to code and data. Advanced English (C1) and working hours that overlap the full US business day and European afternoons.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3
Paradigms:	Object-Oriented Programming, Functional Programming (pure functions, immutability, higher-order functions)
Frontend:	React, Component-Based Architecture, Responsive Web Design
Backend:	Node.js, Express.js, Django, REST APIs, SOAP / XML Web Services, CRUD Operations
Databases:	MongoDB, MySQL, Oracle
Cloud & DevOps:	AWS, Serverless Functions, Render, Vercel, Git, GitHub
Testing:	Unit & Integration Testing with Vitest and pytest, Coverage Reporting, API Testing with Postman
Performance:	Query Optimization and Indexing, Caching, Front-End Load-Time Auditing
AI & LLMs:	LLM API Integration, Prompt Engineering, Token and Context Management, AI-Assisted Development Workflows
Methodologies:	Agile (Scrum, Kanban), Code Reviews, Version Control Workflows

PROJECTS

ELD Trip Planner

github.com/matii1942

Python · Django · pytest · JavaScript · Vitest · REST API · Render · Vercel

- Built a full-stack trip planner that calculates truck routes across the U.S. and schedules driving time, rest breaks and fuel stops, enforcing **11 FMCSA regulations** — the 6 Hours-of-Service limits of Part 395.3 plus 5 covering on-duty time, duty-status records and pre/post-trip inspections.
- Engineered a Django backend that handles the route and compliance calculations and exposes them through a REST API, deployed on Render with the responsive JavaScript front end on Vercel.
- Tested both stacks with **56 automated tests**: 27 in pytest, holding the Django Hours-of-Service engine at **91% coverage**, and 29 in Vitest at 100% on the front-end log-sheet modules.

E-Commerce Web Application

github.com/matii1942/ecommerce

JavaScript · React · Node.js · MongoDB · CSS · Render

- Implemented a storefront with a **50-product** catalog, cart functionality and dynamic data handling from the backend.
- Applied component-based architecture and responsive design across every view; deployed live on Render.

Task Manager Application

github.com/matii1942

React · TypeScript · Node.js · Express.js · MongoDB

- Delivered a full-stack task management application exposing **15 REST endpoints** for complete CRUD functionality, backed by MongoDB persistence.
- Designed reusable, responsive React components in TypeScript, handling form validation, application state and API errors.

Neon Swarm — Browser Arcade Game

github.com/matii1942/Neon-Swarm

JavaScript · React · HTML5 Canvas · Web Audio API · GitHub Pages

- Built an arcade shooter running at **60 fps** on HTML5 Canvas — **40 enemies** on curved flight paths, 4 power-up types, and a game loop, collision detection and state machine written from scratch without a game engine.
- Separated the simulation layer from the React UI so interface re-renders stay independent of the frame loop; published and playable on GitHub Pages.

PROFESSIONAL EXPERIENCE

Freelance Full Stack Developer — Law Firm (client project)

2026 – Present

- Designed and shipped a website for a law firm, giving prospective clients a clear way to find and contact a lawyer.
- Created an intake flow where visitors describe their case before being matched with the right lawyer, handling confidential information with care and limiting what is collected.

Data Management & Functional Support — Clínica Espora, ICU

Feb 2014 – 2025

- Maintained clinical records for an intensive care unit handling **up to 20 patients per day**, keeping admission, discharge and treatment data accurate as it changed shift by shift.
- Supported traceability and digital documentation processes relied on daily by medical staff.

Digital Operations Assistant & Web Maintenance — Invid Computers

May 2019 – 2021

- Updated website content, product listings and promotional material across the company's digital platforms, running the publishing, maintenance and reporting workflows behind them.

EDUCATION & LANGUAGES

EDUCATION

- Systems Analysis — ISFT N° 172 (in progress)
- Full Stack Web Development — UTN
- Professional Nurse (prior career)

LANGUAGES

- Spanish — Native
- English — Advanced (C1)
