

MATIAS ARIEL ACOSTA

FULL STACK DEVELOPER · TYPESCRIPT · REACT · NODE.JS · PYTHON/DJANGO · AWS

Buenos Aires, Argentina (UTC-3) | +54 11 6573 7597 | matiasariel1986@hotmail.com

linkedin.com/in/matias-ariel-acosta | github.com/matii1942 | portafolio-stnm.onrender.com

SUMMARY

Full Stack Developer building web applications with TypeScript, React, Node.js and Python/Django — REST and SOAP integrations deployed to production on AWS, Render and Vercel, with tests written as part of the work. Integrates LLM APIs with attention to prompt design, token cost and verifying generated output against the source record. A decade managing clinical data in an intensive care unit, where accuracy and traceability were not optional, is the discipline he brings to code. Advanced English (C1); hours overlap the full US business day.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3
Frontend	React, Vite, Component-Based Architecture, Responsive Design, Accessible Data Visualisation
Backend	Node.js, NestJS, Express.js, Django, REST APIs, SOAP / XML Web Services, CRUD Operations
Databases	PostgreSQL, MongoDB, MySQL, Oracle, Prisma ORM
Cloud & DevOps	AWS (Lambda, RDS, VPC, EventBridge), Terraform, Docker, GitHub Actions, Render, Vercel, Git
Testing	Unit, integration and end-to-end with Vitest, Supertest, Testing Library, pytest; coverage; Postman
Performance	Query Optimisation and Indexing, Caching, Bundle Analysis, Front-End Load-Time Auditing
AI & LLMs	LLM API Integration, Prompt Engineering, Token and Cost Budgeting, Output Verification
Methodologies	Agile (Scrum/Kanban), Code Reviews, Architecture Decision Records, Version Control

PROJECTS

VitaLink — Clinical Data Integration

github.com/matii1942/VitaLink

TypeScript · NestJS · PostgreSQL · Prisma · React · AWS · Terraform · Docker

- Reads admissions and vital signs from a **legacy SOAP** hospital system, normalises them into PostgreSQL and scores every round against **NEWS2** — the Royal College of Physicians standard, transcribed from the published charts and verified against four independent sources before writing code.
- Clinical handover summaries written by a language model in which **every figure is verified against the source record** before the text is served, behind a spend cap enforced before each call.
- Deployed to AWS with **Terraform** — two Lambda functions, RDS and an hourly schedule — and covered by **358 automated tests** across the API, the simulator and the React dashboard.

ELD Trip Planner

github.com/matii1942/eld-trip-planner

Python · Django · pytest · JavaScript · Vitest · REST API · Render · Vercel

- Calculates truck routes across the U.S. and schedules driving time, rest breaks and fuel stops, enforcing **11 FMCSA regulations** — the 6 Hours-of-Service limits of Part 395.3 plus 5 on duty time, duty-status records and inspections. Django REST API on Render, JavaScript front end on Vercel.
- Tested with **56 automated tests** across both stacks: 27 in pytest, holding the Hours-of-Service engine at **91% coverage**, and 29 in Vitest at 100% on the front-end log-sheet modules.

E-Commerce Web Application

github.com/matii1942/E-commerce

JavaScript · Express.js · Bootstrap · Render

Storefront with a **37-product catalogue** across three categories, served by an Express API and rendered with vanilla JavaScript — no framework between the code and the DOM. Cart persists in the browser between pages with add, remove, empty and checkout, plus client-side filtering; live on Render.

Neon Swarm — Browser Arcade Game

github.com/matii1942/Neon-Swarm

JavaScript · React · HTML5 Canvas · Web Audio API

Arcade shooter running at **60 fps** on HTML5 Canvas — **40 enemies** on curved flight paths, 4 power-up types, and a game loop, collision detection and state machine written from scratch without a game engine. The simulation layer is kept out of React so re-renders never touch the frame loop; published on itch.io.

PROFESSIONAL EXPERIENCE

Freelance Full Stack Developer — Law Firm (client project)

2026 – Present

- Designed and shipped a website giving prospective clients a clear way to find and contact a lawyer, including an intake flow where visitors describe their case before being matched — handling confidential information with care and limiting what is collected.

Data Management & Functional Support — Clínica Espora, ICU

Feb 2014 – 2025

- Maintained clinical records for an intensive care unit handling **up to 20 patients per day**, keeping admission, discharge and treatment data accurate as it changed shift by shift.
- Supported traceability and documentation processes relied on daily by medical staff, querying and maintaining the unit's records in MySQL.

Digital Operations Assistant & Web Maintenance — Invid Computers

May 2019 – 2021

Updated website content, product listings and promotional material across the company's digital platforms, running the publishing, maintenance and reporting workflows behind them.

EDUCATION & LANGUAGES

Education	Systems Analysis — ISFT N° 172 (in progress) · Full Stack Web Development — UTN · Professional Nurse (prior career)
Languages	Spanish — Native · English — Advanced (C1)
